EXPERIENCE

Incedo Inc.

July 2022 – Present

Senior DevOps Engineer

Pune

- Developed a one-click installer using Python, OCI APIs, Kubernetes, Spinnaker, and CI/CD, cutting deployment time by **99.07%** from 1.5 days to 20 minutes for 110+ microservices.
- Provisioned a UAT server on OCI using Terraform modules and provisioners, optimized testing pipeline with GitLab CI, achieving a **65%** reduction in testing time
- Created a Python tool integrating PostgreSQL and Teams webhooks to alert developers of build failures, reducing response time by **67%** and automating failure reports with a higher management escalation matrix for repeated issues
- Built a Python-based system to notify developers via email when UAT fails, targeting only those listed in the changelog, reducing noise and improving response time by **20%**
- Collaborated in the migration from monolith to microservices by converting Chef scripts to Shell and building a streamlined CI/CD pipeline with GitLab CI, Kubernetes, Docker, and Helm—boosting deployment frequency by **25%**
- Designed and developed Python scripts for release versioning of 20+ architecture products, leveraging GitLab and Jira APIs. Streamlined the release management process by automating versioning tasks
- Deployed a secure AWS infrastructure using Terraform with VPCs, subnets, EC2, S3, ECS, RDS, EKS and IAM roles supporting a proof of concept with full access control and networking configuration
- Engineered a Nagios-Microsoft Teams integration using Python, enabling real-time alert notifications and enhancing system observability,, and accomplishing a notable **60%** reduction in the resolution time of the alert
- Guided a team of three interns in creating a Django-based DevOps dashboard, instrumental in company-wide DevOps-related updates and notifications
- Built scalable Terraform-based Infrastructure as Code (IaC) pipelines and deployed Kubernetes clusters with HPA and Cluster Autoscaler, cutting infrastructure setup time by **54%** and improving resource utilization
- Actively contributed to a rotating on-call schedule, ensuring rapid response and resolution of production incidents and production support to uphold service level objectives (SLOs) and maintain SRE best practices
- Created base Docker images for microservices spanning diverse technology stacks such as Python, Java, Node.js, leading to a **25%** reduction in build time

Maximus Infoware

May 2021 – July 2021

Software Engineering Intern

Mumbai

- Engineered a pilot ML model using Prophet to predict terminal transaction count and indent dates, achieving **70%** accuracy and assessing its scalability for full implementation

EDUCATION

NMIMS University

Mumbai

BEng in Computer Science with Honors in Machine Learning

July 2022

TECHNICAL SKILLS

Languages: Python, HTML, MySQL, Shell Scripting, Bash Scripting

Frameworks: Jenkins, Docker, Kubernetes, Terraform, OCI, AWS, Helm, Spinnaker, Ansible

Tools: Git, GitHub, JFrog Artifactory, Linux (RHEL8), Data Structures and Algorithms Nagios, GitLab CI/CD, Grafana, Prometheus

CERTIFICATIONS

Certified Kubernetes Administrator (CKA)

July 2025

- Hands-on experience with Kubernetes cluster setup using kubeadm, high availability configurations, RBAC, Pod scheduling and affinity, workload autoscaling, Helm, Kustomize, CRDs and operators, persistent storage, CoreDNS, Ingress and service types, network policies, and end-to-end troubleshooting of workloads, networking, and cluster components

PROJECTS

Arpanet | *MongoDB, Express.js, React.js, Node.js (MERN)*

July 2023

- Architected a full-stack social media application using the MERN stack with a focus on reusable components
- Designed 20 REST APIs enabling user interactions, including user authentication, profiles, post creation, commenting, and post reactions

Udemy Instructor | *Python, Online Teaching, Course Development*

Present

- Instructed over 6,200 students in Python programming, achieving a 4.1/5.0 rating through hands-on learning, coding exercises, and real-world projects
